VERSAPLUG

Model: VSP
Plug Fan

MOVING YOUR WAY

FANSIZER®

Product Selection Software

FanSizer software allows you to select the best centrifugal or axial unit for your application. Input CFM and static pressure, and FanSizer will make the optimum selection. It allows you to complete job schedules which you can store, modify and print in seconds. Features include: on-line help, on-screen product drawings and dimensions, and complete text specifications. In addition, you can convert job schedules to ASCII code for use with other programs like word processing.

FANCAD®

Library of CAD Drawings

FanCad is a library of drawings for use with computer-aided design (CAD) systems. FanCad's pre-drawn details can save hours of drafting time. Included are all popular PennBarry fans and related items.

Features and Benefits

VSP - VersaPlug Fan

Belt Drive

The VersaPlug saves space because it usually needs no connecting ductwork. The motor and drive assemblies are mounted on a sturdy base and directly fastened to the plenum wall, eliminating the need for extra support pedestals. The shaft goes through the wall and drives the fan wheel to circulate air in the plenum. These versatile units are designed to become an integral part of ovens, spray booths, HVAC or other equipment.

VersaPlug Features

- Wheel diameters from 12¹/₄" to 49" in AMCA Class I or II
- Air volumes to 50,000 cfm
- Efficient, non-overloading fan with the sturdy backward inclined wheel
- Standard unit includes wheel, motor and drive, motor pedestal and inlet cone
- One design for horizontal or vertical mounting
- Temperatures to 300°F for standard unit. With heat fan accessories, maximum temperature is 750°F
- Available with or without scroll housing
- Available pre-assembled for quick, easy installation

Wheel

The VersaPlug fans are equipped with heavy-duty backward inclined wheels designed to provide optimum performance for most operating conditions. The solid, single thickness blades are die cut and firmly attached to the backplate. A spun wheel cone is then welded to the blades. This wheel cone provides an exact overlap with the detached inlet cone to maximize the fans efficiency.

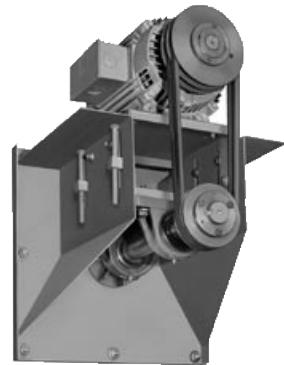

The VersaPlug wheel is adjustable on the extra-long shaft to accommodate a wall up to 4" thick.

Standard construction material is mild steel, but wheels can also be manufactured in aluminum, stainless steel and other materials.

Motor Mount

The VersaPlug motor is mounted on a sturdy, adjustable pedestal attached to a rectangular metal platform. This platform can be bolted directly to the desired surface, allowing either horizontal and vertical installation. Lifting lugs are attached to the mounting plate for easier handling. Four motor adjustment bolts allow the motor base to be easily maneuvered for belt replacement, drive adjustments and motor alignment.

Options and Accessories

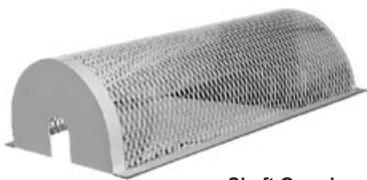

VersaPlug Fan - VSP

Belt
Guard

Belt Guard

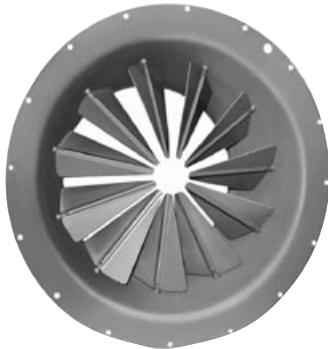

Sturdy steel belt guards are available for the VersaPlug fans. Optional totally enclosed belt guards can also be furnished to meet most safety requirements.

Shaft Guard

Shaft Guard

Shaft guards made of expanded metal are available to meet most safety requirements. The guards extend the entire length of the pedestal to enclose bearings and shaft cooler with wire mesh.

Inlet Vane

Inlet Vanes

Variable inlet vanes can be installed to regulate airflow as it enters the fan. Vanes are available in the external or nested style and are recommended for low temperature applications only. Stainless steel rods and bronze bushings are standard on PennBarry inlet vanes.

Housing (optional)

An optional rotatable housing which can be mounted to the plenum is available for VersaPlug fans. To make installation easier, flanges and bracing are not included with the standard housing. Some applications, however, may require suitable bracing.

Additional Options

Type "C" spark resistant construction, housing drains, shaft seals, 500°F and 750°F heat fan packages and insulated plugs.

Selection Criteria

VSP - VersaPlug Fan

Performance data for VersaPlug fans is based on the following standard air conditions.

Density 0.075 lbs. per cubic feet
 Temperature 70°F
 Pressure 29.92 inches Hg
 Housing condition standard housed fan

To select the proper fan for your application, adjustments must be made for actual altitude, temperature and unhoused wall proximity factors. Use the following steps to correct for these conditions. For housed fans, eliminate steps 3 and 4.

1. Correct actual static pressure for altitude and temperature differences by using the three-step Density Correction Procedure found on page 23. This step will determine the standard static pressure.
2. Select the size of fan needed to operate at the desired cfm by using the performance tables that start on page 7.
3. Calculate the Wide Open Volume (WOV) at which the fan will operate by multiplying the "Q" factor (found below in Table 1) by the fan RPM. Then use the following equation to determine percent of WOV:

$$\frac{\text{Specified cfm}}{\text{WOV cfm}} = \% \text{ WOV}$$

Table 1. WOV "Q" Factors

| SIZE | 122 | 135 | 150 | 165 | 182 | 200 | 222 | 245 | 270 | 300 | 330 | 365 | 402 | 445 | 490 |
|----------|-------|-------|-------|-------|-------|-------|-------|-------|--------|--------|--------|--------|-------|-------|-------|

| 65 | RPM BHP | 1.037 1.241 | 1.032 1.187 | 1.033 1.192 | 1.025 1.120 | 1.027 1.142 | 1.038 1.205 | 1.047 1.178 | 1.032 1.116 | 1.048 1.184 |
| 60 | RPM BHP | 1.057 1.299 | 1.055 1.229 | 1.057 1.242 | 1.047 1.187 | 1.043 1.196 | 1.055 1.265 | 1.063 1.224 | 1.046 1.158 | 1.063 1.223 |
| 55 | RPM BHP | 1.078 1.354 | 1.075 1.293 | 1.079 1.307 | 1.068 1.233 | 1.062 1.267 | 1.073 1.332 | 1.080 1.271 | 1.063 1.214 | 1.081 1.270 |
| 50 | RPM BHP | 1.098 1.417 | 1.095 1.366 | 1.100 1.369 | 1.086 1.277 | 1.078 1.344 | 1.093 1.403 | 1.094 1.323 | 1.080 1.272 | 1.100 1.330 |
| 45 | RPM BHP | 1.119 1.500 | 1.115 1.449 | 1.121 1.433 | 1.103 1.343 | 1.095 1.426 | 1.113 1.472 | 1.107 1.382 | 1.095 1.325 | 1.119 1.395 |

NOTE: For multiple wall conditions, there may be several values for "d". In this case calculate for all "d" values and use the highest resulting RPM and BHP factors.

4. Correct for unhoused wall proximity by multiplying BHP and fan RPM by the unhoused wall proximity factor found in Table 2.
5. Convert the BHP found in Step 4 to the actual operating BHP by multiplying it by the density ratio. (Use the density ratio which was calculated for Step 1.) **If the operating temperature is higher than the start-up temperature, a larger motor may be needed to prevent overload at start-up.** Use the Density Correction Procedure on page 23 to determine the density ratio at the start-up temperature and altitude. Multiply the BHP found in Step 4 by this density ratio to obtain the required start-up BHP.
6. If the plug fan will be used in high temperatures, use the RPM Reduction Factors Chart on page 23 to find the appropriate derating factor. Multiply the maximum wheel RPM (top right, page 23) by the derating factor to obtain the highest allowable operating RPM.
7. If the operating temperature exceeds 300°F, the 500°F heat fan package must be used. If the operating temperature is over 500°F, the 750°F heat fan package must be used. Consult the factory for temperatures over 750°F.

An example of VersaPlug selection is found on the next page.

Wheel-Plenum Relationship

Selection Criteria

VersaPlug Fan - VSP

As an example, we will choose a fan to operate under these system requirements:

CFM 15,000
Static pressure 2.25" (actual)
Temperature 200°F
Altitude 2,000 feet

The fan will be installed in a plenum near two walls, with a distance of 8.25" between the wall and the wheel.

1. For our altitude of 2,000 feet we obtain a CF_{ALT} of .930. Putting this into the equation, we get:

$$.930 \times \frac{530^{\circ}R}{200^{\circ}F + 460^{\circ}F} = .747 \text{ density ratio}$$

To obtain standard static pressure,

$$\frac{2.25}{.747} = 3" \text{ standard static pressure}$$

2. Using the performance tables we find that five fan sizes can deliver 15,000 cfm at 3" SP. In this example we will use the size 330, the middle of the five sizes. The catalog performance (interpolated) is 967 rpm and 10.18 bhp. Note that the 10.18 bhp is for .075 density, not actual operating density.
3. Using Table 1, we find a "Q" factor of 22.181 for fan size 330.

$$22.181 \times 967 \text{ rpm} = 21,449 \text{ cfm}$$

$$\% \text{ WOV} = \frac{15,000}{21,449} = 70\% \text{ WOV}$$

4. To obtain d/D relationship for our case:

$$\frac{8.25"}{33"} = \frac{1}{4}$$

With a 1/4 relationship at two walls and 70% WOV we obtain:

Correction for bhp = 1.070

Correction for rpm = 1.008

$$10.18 \text{ bhp} \times 1.070 = 10.89 \text{ bhp}$$

$$967 \text{ rpm} \times 1.008 = 975 \text{ rpm}$$

5. We now convert the bhp to our actual conditions:

$$10.89 \times .747 \text{ (density factor for } 200^{\circ}\text{F, 2000 ft. ASL)} = 8.13 \text{ operating bhp}$$

$$10.89 \times .930 \text{ (density factor for start-up temperature)} = 10.13 \text{ start-up bhp (70°F)}$$

We now have the following:

330 VersaPlug Fan

Air Volume 15,000 cfm
Static pressure 2.25 inches
Temperature 200°F
Elevation 2000 feet
Speed 975 rpm
Operating bhp 8.13
Start-up bhp 10.13

6. Finally, we must check wheel speed.

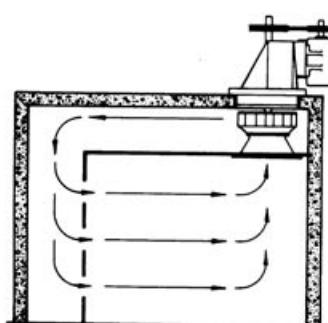

Rpm reduction factor = .96 (from page 25)

Max. rpm for Class I, 330 = 1277

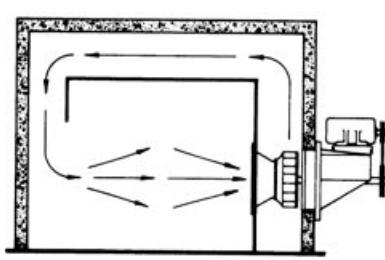

$$1277 \times .96 = 1225$$

Operating rpm for our example (975 rpm) is less than 1225, so the standard Class I wheel is acceptable.

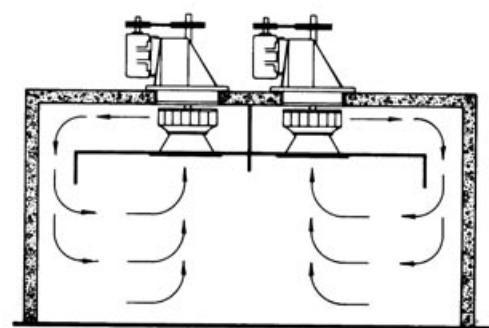

Typical Airflow Patterns for the VersaPlug Fan

Omni-directional circulation

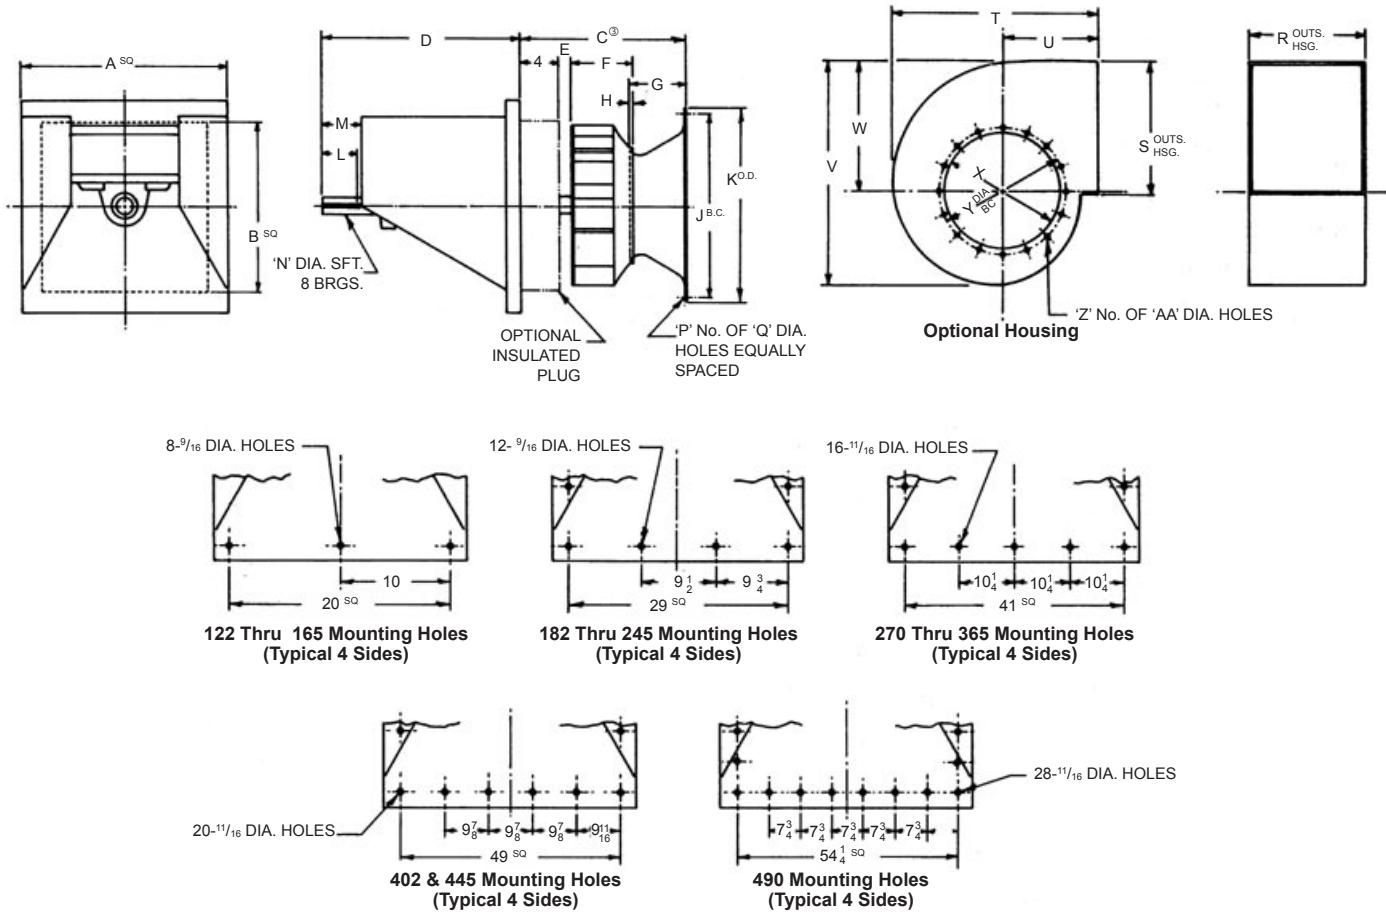

Uni-directional circulation

Counter-directional circulation

Dimensional Data

VSP - VersaPlug Fan

Notes:

1. Wheel and housing are available in CW or CCW rotation.
2. Wheel opening is in both sides of housing.

Notes: 1) Power rating (BHP) does not include belt drive losses.
2) Bold figures indicate maximum static efficiency.
3) Single Width, Single Inlet.

Engineering Notes

VSP - VersaPlug Fan

Density Correction Procedure

Our catalog performances, in accordance with AMCA standards, are based on standard air density of .75 lbs. per cubic foot and 29.92 inches Hg barometric pressure. Conversion factors to correct for high altitudes and temperatures can be found in the chart at right.

Use the following method to convert actual conditions to standard air conditions.

1. Determine the altitude correction factor (CF_{ALT}) from the chart.

| Altitude | CF_{ALT} | Altitude | CF_{ALT} |
|----------|------------|----------|------------|
| 0 | 1.000 | 5000 | 0.832 |
| 500 | 0.982 | 6000 | 0.801 |
| 1000 | 0.965 | 7000 | 0.772 |
| 2000 | 0.930 | 8000 | 0.743 |
| 3000 | 0.896 | 9000 | 0.714 |
| 4000 | 0.864 | 10000 | 0.688 |

2. Density Ratio:

$$CF_{ALT} \times \frac{530R}{Temp. ^\circ F + 460^\circ F}$$

3. Divide the actual static pressure (in inches of water) by the density ratio to establish standard static pressure. Then use the new static pressure to determine fan performance from the tables in this catalog.

High Temperature Operation

For operating temperatures to 300°F:

PennBarry standard VersaPlug construction is suitable. No additional accessories are required in this temperature range.

For temperature from 301°F to 500°F:

The 500°F Heat Fan Package must be ordered. This accessory group includes a shaft cooler and guard, shaft seal, high temperature grease bearings.

For temperatures from 501°F to 750°F:

The 750°F Heat Fan Package must be ordered. The 750°F HFP includes a shaft cooler and guard, shaft seal, high temperature grease bearings, and special high temperature paint. Oversize shafts may also be required for operation in the 501°F to 750°F temperature range; determination is made by the factory.

For temperature above 750°F:

Contact the factory.

Insulated plugs are not required but are recommended when the fan will be used for elevated temperatures. This insures a continuous wall of high temperature insulation even where the fan's shaft goes through the oven or kiln wall. This square plug provides 4" to 6" of insulation around the shaft and seals the opening where the fan is installed to insure a safe ambient temperature around the bearing of 120°F or less. The insulated plug is assembled to the base unit at the factory.

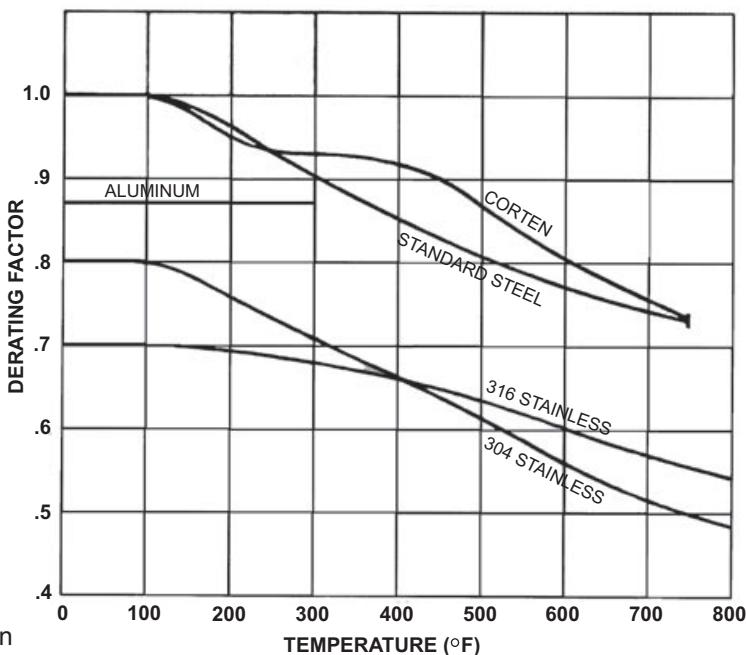

Max. RPM • WR² • Fan Weights

| Size | WR ² | | Net Unit Weight | | | | Maximum Wheel RPM | |

| 490 | 722.00 | 860.0 | 916 | 1060 | 135 | 681 | 937 | 1207 |

Note:

1. WR² is for the entire rotating assembly.
2. Net unit weights are approximate; cone, motor and drive not included.

RPM Reduction Factors

Sample Specifications

VersaPlug Fan - VSP

General

Furnish and install, as shown on the plans, PennBarry VersaPlug. Unless otherwise noted, all fans shall conform to the layout on the drawings. **Motor horsepower shall not be exceeded.** Fans shall be constructed of low carbon steel and painted with an approved corrosion resistant coating. Each fan shall receive a documented inspection by a qualified inspector before leaving the factory. The inspection shall include welding, dimensions, bearings and overall workmanship.

Wheels and Mounting

Wheels shall be the energy efficient backward inclined type. Wheel diameters shall be in accordance with the standard sizes adopted by AMCA for non-overloading fans.

Fan pedestals shall be rigidly built and braced. Pedestals shall be welded to a square, flat rigid mounting plate. Lifting lugs shall be welded to the mounting plate to facilitate handling of the fan.

Shaft and Bearings

First critical shaft speeds shall be at least 142% of the fan's maximum operating speed. Bearings shall be designed for heavy-duty service with a minimum L_{10} life of at least 40,000 hours. Bearings ratings are based on the fan's maximum catalogued operating speed. Bearings shall be either single row ball or double row spherical roller type in a one-piece cast iron housing, or a double row spherical roller type in a split cast iron pillow block. Bearings shall be firmly mounted to a rigid metal plate which is to be welded to the motor support.

Accessories

Accessories shall be provided as called for in the plans and specifications. Required accessories include housing, type C spark resistant construction, drain, variable inlet vanes with stainless steel rods, shaft seal, belt guard, shaft guard, heat fan package, insulated plug and special coatings.

Performance and Testing

Fan performance shall be based on tests conducted in accordance with the AMCA Standard Test Code for Air Moving Devices. Fans shall have a sharply rising pressure characteristic extending through the operating range and continuing to rise well beyond the efficiency peak to assure stable operation under all conditions. Horsepower characteristics shall be truly self-limiting and shall reach a peak in the normal selection area.

Balancing

A factory dynamic balance shall be made on all fans after assembly. An IRD or PMC analyzer shall be used to measure velocity, and the final reading **shall not exceed 0.1 inches per second.**

Submittals

Submittals for approval of equipment shall include _____ copies of outline drawings and pressure-volume performance curves showing point of operation.

Testing the Unhoused VersaPlug

The PennBarry VersaPlug fan was subjected to an exacting series of air performance tests for the determination of actual derating factors for both RPM and BHP for the unhoused condition. All tests were performed in an AMCA approved laboratory according to the test code ASHRAE 51-75 AMCA 210-74, "Laboratory Methods of Testing Fans for Rating," prepared jointly by the American Society of Heating, Refrigerating and Air Conditioning Engineers and the Air Movement and Control Association. Fans were tested on an inlet duct test setup with the test units bolted directly to a plenum which was specially designed to simulate actual field applications.

Air performance tests were performed over the complete range of the fan's characteristic pressure-volume curve to determine its performance compared to a housed unit of the same size. Wall conditions within the special plenum were changed to various wheel-to-wall clearances and number of walls. The proximity factors were then calculated, based on the tests, and are shown on page 5.

Because the unhoused proximity factors were determined by actual tests, you can be assured that desired performance conditions will be met when derating calculations are correctly applied.

One Year Limited Warranty

VSP - VersaPlug Fan

What Products Are Covered

PennBarry Commercial and Industrial Fans (each, a "PennBarry Product")

One Year Limited Warranty For PennBarry Products

PennBarry warrants to the original commercial purchaser that the PennBarry Products will be free from defects in material and workmanship for a period of one (1) year from the date of shipment.

Exclusive Remedy

PennBarry will, at its option, repair or replace (without removal or installation) the affected components of any defective PennBarry Product; repair or replace (without removal or installation) the entire defective PennBarry Product; or refund the invoiced price of the PennBarry Product. In all cases, a reasonable time period must be allowed for warranty repairs to be completed.

What You Must Do

In order to make a claim under these warranties:

1. You must be the original commercial purchaser of the PennBarry Product.
2. You must promptly notify us within the warranty period of any defect and provide us with any substantiation that we may reasonably request.
3. The PennBarry Product must have been installed and maintained in accordance with good industry practice and any specific PennBarry recommendations.

Exclusions

These warranties do not cover defects caused by:

1. Improper design or operation of the system into which the PennBarry Product is incorporated.
2. Improper installation.
3. Accident, abuse or misuse.
4. Unreasonable use (including any use for non-commercial purposes, failure to provide reasonable and necessary maintenance as specified by PennBarry, misapplication and operation in excess of stated performance characteristics).
5. Components not manufactured by PennBarry.

Limitations

1. In all cases, PennBarry reserves the right to fully satisfy its obligations under the Limited Warranties by refunding the invoiced price of the defective PennBarry Product (or, if the PennBarry Product has been discontinued, of the most nearly comparable current product).
2. PennBarry reserves the right to furnish a substitute or replacement component or product in the event a PennBarry Product or any component of the product is discontinued or otherwise unavailable.
3. PennBarry's only obligation with respect to components not manufactured by PennBarry shall be to pass through the warranty made by the manufacturer of the defective component.

General

The foregoing warranties are exclusive and in lieu of all other warranties except that of title, whether written, oral or implied, in fact or in law (including any warranty of merchantability or fitness for a particular purpose).

PennBarry hereby disclaims any liability for special, punitive, indirect, incidental or consequential damages, including without limitation lost profits or revenues, loss of use of equipment, cost of capital, cost of substitute products, facilities or services, downtime, shutdown or slowdown costs.

The remedies of the original commercial purchaser set forth herein are exclusive and the liability of PennBarry with respect to the PennBarry Products, whether in contract, tort, warranty, strict liability or other legal theory shall not exceed the invoiced price charged by PennBarry to its customer for the affected PennBarry Product at the time the claim is made.

Inquiries regarding these warranties should be sent to: PennBarry, 1401 North Plano Road, Richardson, TX 75081.
